

## eTapestry Auctionpay Integration

### What is it?

Auctionpay is a software product that manages every detail of a benefit auction. If your fundraising strategy includes a benefit auction, and if you are using the Auctionpay software, then you will want to take a look at the eTapestry Auctionpay Integration module. This module provides your non-profit with a method of seamlessly exchanging donor information and auction donations between eTapestry and the Auctionpay fundraising product. No more double entry!

### How does it work?

Before the auction begins, you prepare by importing contact information about your eTapestry constituents into Auctionpay. This will free your staff of the chore of entering this data into Auctionpay during the auction.

When you receive a donation from a new donor during the auction, simply enter their contact information into Auctionpay. When the auction is over, you will be able to export these new donors out of Auctionpay, and import them into eTapestry without having to type a single character.

All donations that you receive during the auction will be entered directly into Auctionpay. The Auctionpay Integration will allow you to upload all of these donations into eTapestry when the auction is over.

There are only a few simple set-up tasks required within eTapestry to implement the Auctionpay Integration. Once those are done, you are ready to go!

### Summary

eTapestry's Auctionpay Integration module will reduce the data entry time required to effectively integrate auction donations and donors into your overall fundraising database. It eliminates the need to manually enter donations and donor information into two different systems, saving time and reducing the potential for error.

The Auctionpay Integration Module is available for a \$150 (USD) setup fee and an additional \$600/year.
